

A Brilliant Idea

Oligo Professionnel innovates once again with a new high performance lightener that can be applied on and off the scalp. With its purified oil base, it protects the hair and scalp during the lightening process, achieving spectacular blondes while maintaining shiny, healthy and hydrated hair.

But the brilliant part is to offer this lightener in a cream texture. Gone are the days of handling those unpleasant and unhealthy powders. Blacklight cream lightener is available in a 500g/17.5oz tube and in a 1kg/35oz jar.

Due to its purified oil base, the Blacklight cream lightener allows for a 1:1 mixing ratio application directly on the scalp.

The high concentration of lipids found in the formula, protects the hair and scalp during the lightening process. This protection allows for maintaining all the strength of the formula's lightening agents without dilution, resulting in optimal lightening of up to 7 levels.

The blue violet base of Blacklight cream lightener allows for optimal lifting and toning in one single step resulting in beautiful frosty blondes. Blacklight cream lightener's texture eliminates the emission of harmful particles into the air thereby creating a much healthier and safer working and breathing environment.

Jojoba oil conditions the hair, adds shine and hydrates it during the lightening process. Olive oil is rich in fatty acids, vitamin E (antioxidant) and vitamin K which nourishes, hydrates and protects the hair's fiber. The distinct combination of these two oils allows Blacklight cream lightener to preserve the hair's natural shine.

Blacklight, Simply Brilliant!

In 2010, Oligo Professionnel will celebrate 24 years of innovation. The success and reputation of Oligo Professionnel relies in large part on the technological innovation of its products. Our objective has not changed since Oligo Professionnel was first founded in 1986; offer stylists healthier, safer products that perform well. The line is distributed in North America as well as in Europe and in Asia.
